

# TOGHRUL ABDULLAYEV

## FULL-STACK DEVELOPER

Baku, Azerbaijan • +994 55 490 58 19 • toghrulabdullayev1@gmail.com • www.togrul.dev  
www.linkedin.com/in/toghrul1/ • www.github.com/toghrulabdullayev

### SUMMARY

Full-stack developer specializing in modern web and mobile application development. Proficient in **C#, Go, and TypeScript** with backend and frontend frameworks such as **ASP.NET Core, Node.js, React, and Angular**. Experienced in building microservices-based architectures, implementing software design patterns, and integrating backend APIs with frontend interfaces.

### EXPERIENCE

Full-stack Developer (Self-taught) January 2025 - Present

- Built full-stack web applications using **C#, ASP.NET Core, Go, TypeScript, React, and Angular**
- Designed and consumed RESTful APIs, implementing both secure **JWT** and **OAuth 2.0** authentication flows for user access and third-party integrations
- Developed server-side rendered applications using **Next.js** and built mobile apps using **React Native**, focusing on structured design and code maintainability
- Implemented real-time features and event-driven logic using **Socket.IO** and Server-Sent Events (SSE)
- Optimized data persistence and backend performance by integrating **PostgreSQL, MongoDB** and **Redis** for efficient caching
- Developed CLI and terminal user interfaces (TUIs) in **Go** using Cobra for structured command flows and Bubble Tea with Lipgloss for rich interactive layouts
- Worked with **Linux** and **Bash** scripting to automate workflows
- Applied Domain-Driven Design principles in **ASP.NET Core** applications to organize domain logic and improve modularity
- Refactored and debugged code to improve maintainability, reliability, and clarity

Front-end Developer (Self-taught) January 2024 - October 2024

- Developed multiple personal projects using **HTML, CSS, JavaScript, TypeScript, React**
- Built responsive and user-friendly interfaces with attention to performance and accessibility
- Utilized modern hosting services, development tools, and version control with **Git** and **GitHub**
- Used design tools such as **Figma** and **Canva** to create visually appealing layouts

### EDUCATION

Baku Higher Oil School, Bachelor's Degree in Computer Science September 2024 - Present

### SKILLS

**Programming Languages:** C#, TypeScript, Go, Python

**Frontend:** React, Angular, Next.js, React Native, Expo, TailwindCSS, Redux Toolkit, Tanstack Query

**Backend:** ASP.NET Core, Node.js, Express, gRPC, JWT, OAuth 2.0, Socket.IO

**Databases:** PostgreSQL, MongoDB, Redis, Firebase

**Tools & Platforms:** Linux, Bash, Git, Github, Docker

PROJECTS

ASP.NET Core Microservices Project

A scalable, distributed backend system built with containerized microservices and a modern frontend interface

- Built microservices using clean architecture on **ASP.NET Core**, structuring domain logic around Domain-Driven Design (DDD) principles
- Implemented the **CQRS** pattern using **MediatR** to separate read and write operations for optimized service performance
- Utilized **Entity Framework Core**, **PostgreSQL**, **MongoDB**, and **Redis** for persistent data storage, caching, and document management
- Configured secure user authentication using **Identity**, containerized microservices with **Docker**, and developed a dynamic frontend using **Angular**

Dissension — Discord-like Social Platform

A scalable, real-time social platform featuring messaging, presence, and interactive communication

- Built the frontend using **React** to deliver a scalable, responsive, and modular user interface
- Developed a **Spring Boot** backend using Domain-Driven Design (DDD), securing APIs with **OAuth 2.0/JWT** and supporting REST and STOMP
- Integrated **PostgreSQL**, **Redis**, and **Cloudinary** for persistence, caching, media storage, and session management
- Engineered real-time messaging and presence updates via **STOMP**

Osmium — Minecraft Server Manager (CLI & TUI)

A fast, local terminal tool for managing Minecraft servers, mods, and plugins

- Built an interactive TUI in **Go** using **Cobra** and **Bubble Tea** to simplify server management
- Automated mod/plugin installs via the **Modrinth API**, validating file versions and compatibility
- Leveraged **Go's** concurrency to handle background downloads and server monitoring while maintaining a responsive UI
- Distributed as a standalone 5MB binary that stores all data locally for user privacy
